# Product Description

## Monoclonal anti IGF-2

**Product:** Monoclonal antibody against human Insulin-like growth factor 2

**Code number:** 73

**Lot No.:** 5.93

**Form:** lyophilized concentrated supernatant (no preservatives).

**Quantity:** 200 µl

**Reconstitution:** with 200 µl bidistilled water

### Description

Antibody 73 is a mouse IgG1 directed against an epitope overlapping with residues 27-45 of IGF2. It has an apparent affinity constant of 5.5 l/nMol and can be used at a dilution of approx. 1:10'000 for RIA of human serum. A half maximal displacement is achieved by 1.2-1.3 ng IGF2 per 0.2 ml. The lowest concentration detectable is 0.3 ng IGF2 per 0.2 ml. No crossreactivity is observed with human insulin (50 µg/200 µl), proinsulin (1 µg/200 µl) and D-peptide of IGF2 (10µg/200µl). Antibody 73 recognizes IGF 2 of other species with following approximate relative potencies: guinea pig, human, mouse, rabbit, rat = 1.3:1:<0.4:<0.1:<0.1. Other applications have not been tested.

### Working dilutions

For RIA of human serum: 1:10'000.

For other applications: not tested.

### Storage

For long storage, keep small portions (1-2 µl) at -80° C (or at least at -20°C). For continuous use keep at 4°C (with 0.01 % Na-azide) Avoid repeated freezing and thawing.
